A Prompts

We conducted task-specific and model-specific prompt engineering to obtain the optimal output across different tasks and large language models (LLMs). Initially, we designed distinct prompts for dataset 1 and dataset 2 based on the commonly adopted GPT-style prompting paradigm. These prompts are shown below in Table S3 and Table S4. When addressing different sub-tasks, we modified the study lists, test lists, and the number of questions each LLM was required to answer accordingly, without altering the overall prompting structure.

For offline models, we first engaged in an interactive process to obtain prompts better compatible with their specific requirements. The interaction prompt was shown in Table S5. Through this interaction, we obtained revised prompts tailored to the two offline models. For dataset 2, the offline models required minimal modifications. Therefore, we retained the original GPT-style prompt for dataset 2 across both offline models. However, for dataset 1, modifications were necessary. Specifically, the offline LLMs made several modifications to better align the prompts with their requirements. The revised prompt for Llama2 and Mistral is provided below in Tables S6 and S7.

We proceed to present the study and question lists used across all experiments and their respective sub-experiments in the following tables.

B Tables

Table S1: Persons and locations used for the facts in the dataset 1

Person				**Location**			
account	actor	artist	athlete	airport	attic	bank	barn
barista	chef	coach	counselor	beach	bridge	casino	castle
cowboy	dancer	dentist	designer	church	cinema	clinic	factory
detective	doctor	driver	engineer	gallery	garage	garden	gym
farmer	firefighter	gardener	hippie	hallway	hospital	hotel	kitchen
inventor	judge	lawyer	maid	laboratory	library	mall	museum
musician	nurse	pharmacist	photographer	nightclub	office	park	pharmacy
pilot	pirate	plumber	queen	pier	playground	prison	restaurant
scientist	sheriff	soldier	spy	school	stadium	station	studio
teacher	tourist	translator	writer	temple	theater	university	zoo
