Table S2: Target words and associates used in the dataset 2

Anger	Black	Bread	Chair	Cold	Doctor
mad	white	butter	table	hot	nurse
fear	dark	food	sit	snow	sick
hate	cat	eat	legs	warm	lawyer
rage	charred	sandwich	seat	winter	medicine
temper	night	rye	couch	ice	health
fury	funeral	jam	desk	wet	hospital
ire	color	milk	recliner	frigid	dentist
wrath	grief	flour	sofa	chilly	physician
happy	blue	jelly	wood	heat	ill
fight	death	dough	cushion	weather	patient
hatred	ink	crust	swivel	freeze	office
mean	bottom	slice	stool	air	stethoscope
calm	coal	wine	sitting	shiver	surgeon
emotion	brown	loaf	rocking	arctic	clinic
enrage	gray	toast	bench	frost	cure
Foot	**Fruit**	**Girl**	**High**	**King**	**Man**
shoe	apple	boy	low	queen	woman
hand	vegetable	dolls	clouds	England	husband
toe	orange	female	up	crown	uncle
kick	kiwi	young	tall	prince	lady
sandals	citrus	dress	tower	George	mouse
soccer	ripe	pretty	jump	dictator	male
yard	pear	hair	above	palace	father
walk	banana	niece	building	throne	strong
ankle	berry	dance	noon	chess	friend
arm	cherry	beautiful	cliff	rule	beard
boot	basket	cute	sky	subjects	person
inch	juice	date	over	monarch	handsome
sock	salad	aunt	airplane	royal	muscle
smell	bowl	daughter	dive	leader	suit
mouth	cocktail	sister	elevate	reign	old

Table S3: Example Prompt for dataset 1

Example Prompt for dataset 1	
Background	Memorize the study list, where the study list consists of person-location pairs (formatted as "the person is in the location.").
Instruction	Please answer all 64 questions in the question list. If the person-location pair from the questions appears in the study list, respond with "yes"; otherwise, respond with "no."
Input Data	Study List and Question List
Output Indicator	Outputs: The results of the analysis need to be in CSV (comma-separated values). Present the results inside a code box labeled `answers_csv`. Each line should contain the order of each question and the corresponding answer.
Analysis	Here is a template describing how to answer the questions list: 1: Yes 2: No

Table S4: Example Prompt for dataset 2

Example Prompt for dataset 2	
Background	You are a participant in a memory experiment. First, you will be given a study list of words to memorize. After that, you will go through and complete a short list of math problems. Later, you will complete a recognition test with a test list. Some of the words in the test lists may have appeared in the study list I initially asked you to memorize.
Instruction	Study List of Words: Here is the list of words for you to remember. Take a moment to go through them carefully. Math Problems: Solve these 5 simple math questions to ensure a brief delay before the test. Recognition Test: For each word in this list, please decide: Old or New: Whether you think the word was presented in the study list of the study phase (if it was, mark it as "old"; if not, mark it as "new"). Remember or Know: If you judge the word as "old," further specify: "R" (Remember): if you have a vivid memory of the actual presentation. "K" (Know): if you are sure the word was presented but lack a vivid memory of it
Input Data	Study List, Math Problems (if needed), and Test List
Output Indicator	Example Response Format: For each word, provide a response in the format in order: 1: Old/New - R/K (if Old)

Table S5: Interaction Prompt to offline model

Interaction Prompt to offline model	
Instruction	This is the prompt I gave to GPT-4. I would like you to modify it to make it compatible with your own prompt requirements for ***Name of Offline Model***. Please provide me with the revised prompt. **GPT Prompt for dataset 1**

Table S6: Example Prompt for dataset 1 - Llama3

Example Prompt for dataset 1 - Llama3	
Task	Given a study list of 64 person-location pairs and a question list of 64 questions, determine the presence or absence of each person-location pair in the study list and indicate the order.
Input Data	Study List and Question List
Output	A CSV-formatted string containing the results of the analysis, with each line representing a question from the question list and its corresponding answer (yes or no).
Analysis	To answer each question, I will search for the corresponding person-location pair in the study list. If the pair is found, I will respond with "yes"; otherwise, I will respond with "no".

Table S7: Example Prompt for dataset 1 - Mistral

Example Prompt for dataset 1 - Mistral	
Goal	Memorizing the study list, where all sentences are in the format of "The [person] is in the [location]", answer all 64 questions in the questions list (questions are in the form of "Is the [person] in the [location]?") based on the study list. If the person-location pair is found in the study list, answer "yes"; otherwise, answer "no." Please also indicate the order.
Input Data	Study List and Question List
Output	The answers will be provided in CSV format.
